

COMMONWEALTH of VIRGINIA

Office of the

SECRETARY of TRANSPORTATION

# Initial Surface Transportation Performance Report

Nick Donohue

Deputy Secretary of Transportation

July 18, 2017

Virginia Department of Rail and Public Transportation

# Surface Transportation Performance

---

- **HB2241/SB1322 requires Office of Intermodal Planning and Investment to**
  - **Develop performance measures**
  - **Establish targets for future performance**
  - **Report annually on the progress towards to such targets**
- **Board adopted surface transportation performance objectives in December 2015**
- **Initial Surface Transportation Performance Report has been developed based adopted measures**

# VTrans GOAL: ECONOMIC COMPETITIVENESS and PROSPERITY

---

- **Objectives:**
  - **A.1: Reduce the amount of travel that takes place in severe congestion**
    - Percent peak hour VMT occurring in congested conditions.
  - **A.2: Reduce the number and severity of freight bottlenecks**
    - Number of highway bottlenecks with daily freight ton hours of delay per mile > 250,000.
  - **A. 3: Improve reliability on key corridors for all modes**
    - Roadway Buffer Time Index (BTI).
    - Rail/Transit On-Time Performance (OTP).

# A.1: Reduce the amount of travel that takes place in severe congestion

## Percent Peak-Hour Congested

# A.1: Reduce the amount of travel that takes place in severe congestion

---

## Trend Showing Worsening Performance

### Performance Measure:

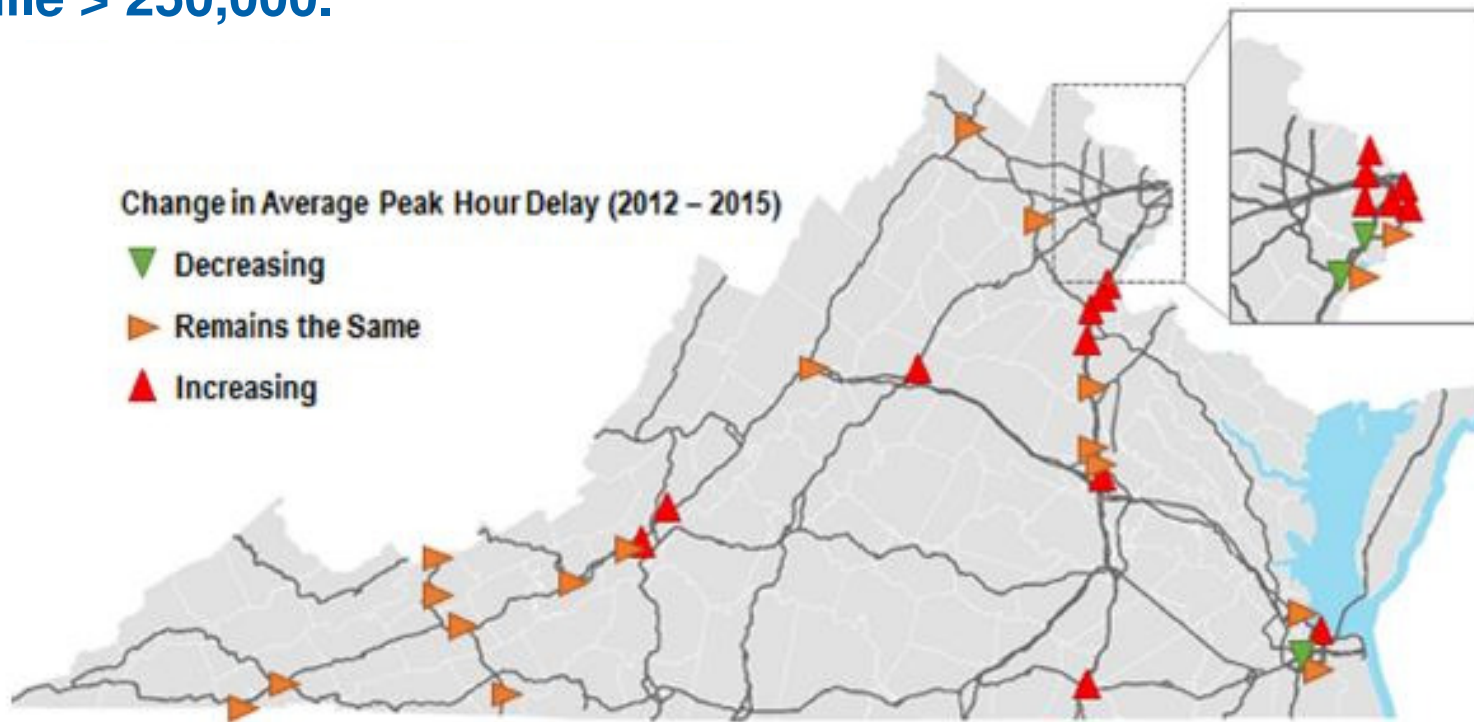

- Percent peak hour VMT occurring in congesting conditions.

- **Worst Locations:**

- Interstates almost double statewide from 2013 to 2015.
- Principal Arterials increase from 2013 to 2015 is minor
- In Northern Virginia the share of peak hour travel experiencing severe congestion slightly decreases in 2015.

## A.2: Reduce the number and severity of freight bottlenecks

Number of highway bottlenecks with daily freight ton hours of delay per mile > 250,000.

## A.2: Reduce the number and severity of freight bottlenecks

---

### Trend Showing Improving Performance with Challenges

#### Performance Measure:

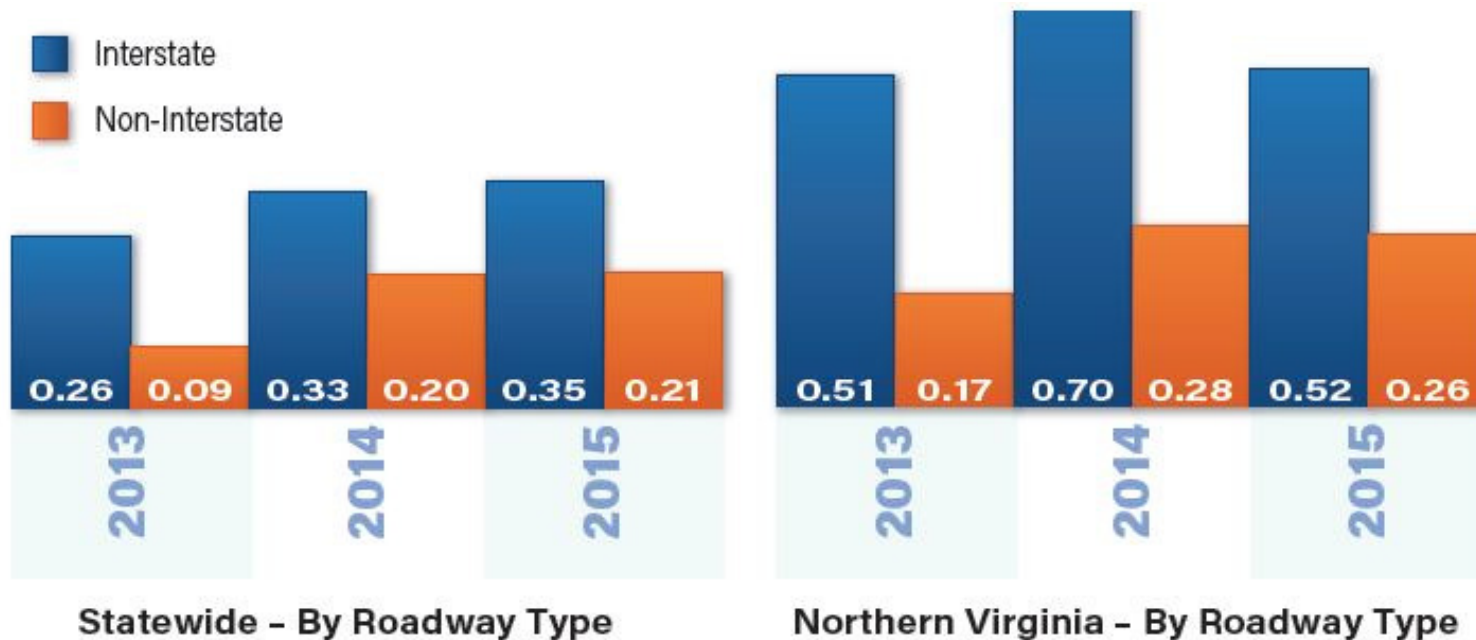

- Number of highway bottlenecks with daily freight on hours of delay per mile >250,000.

#### • Worst Locations:

- Based on 2012 data, 10 of the 37 bottlenecks were in Northern Virginia, with the I-495 from VA 267 to the American Legion Bridge as the most severe bottleneck in the Commonwealth.
- From 2012 to 2015, 20 of 37 bottlenecks showed an improvement or no change in delay per mile.
- Of the 17 bottlenecks showing an increase in delay per mile, 12 were in the I-95 corridor.

# A.3: Improve reliability on key corridors for all modes

## Roadway Buffer Time Index (BTI).

## A.3: Improve reliability on key corridors for all modes

---

### **Trend Showing Improving Performance with Challenges**

#### **Performance Measure:**

- Roadway Buffer Time Index (BTI)

- **Key trends:**

- Statewide BTI slightly increased in 2015 compared to 2013 and 2014 on interstates and principal arterials.
- In Northern Virginia, the buffer time index on interstates decreased significantly from 2014 to 2015, bringing the BTI back to the same level as in 2013. BTI on non-interstates stayed at roughly the same level in 2015 as compared with 2014.

# A.3: Improve reliability on key corridors for all modes

## On-Time Performance by Select Bus Operators in Virginia

Bus System	FY 10	FY 11	FY 12	FY 13	FY 14
Fairfax Connector	93%	98%	97%	96%	97%
PRTC - Omni Link	N/A	N/A	N/A	96%	93%
DASH	93%	95%	91%	92%	92%
CUE	95%	95%	95%	86%	87%
ART	98%	98%	90%	90%	97%
Loudoun County Transit - Commuter Bus	95%	95%	95%	95%	95%
Loudoun County Transit - Local Bus	N/A	N/A	N/A	N/A	95%
WMATA Metrobus	89%	75%	75%	77%	78%
GRTC	N/A	N/A	N/A	N/A	84%
Hampton Roads Transit	N/A	N/A	N/A	73%	84%

## Amtrak Average Departure Delay by Key Stations (2011-2016)

\* Data reported for Newport News are arrival, rather than departure times.  
Source: Amtrak.

## A.3: Improve reliability on key corridors for all modes

---

### Inconclusive Trend Due to Data Limitations

#### Performance Measure:

- Rail/Transit On-Time Performance (OTP)
- For Amtrak stations tracked in this measure, average departure delay increased slightly in 2015 and 2016, except for the Charlottesville station which decreased average departure delay by 4 minutes in 2015 and 2016.

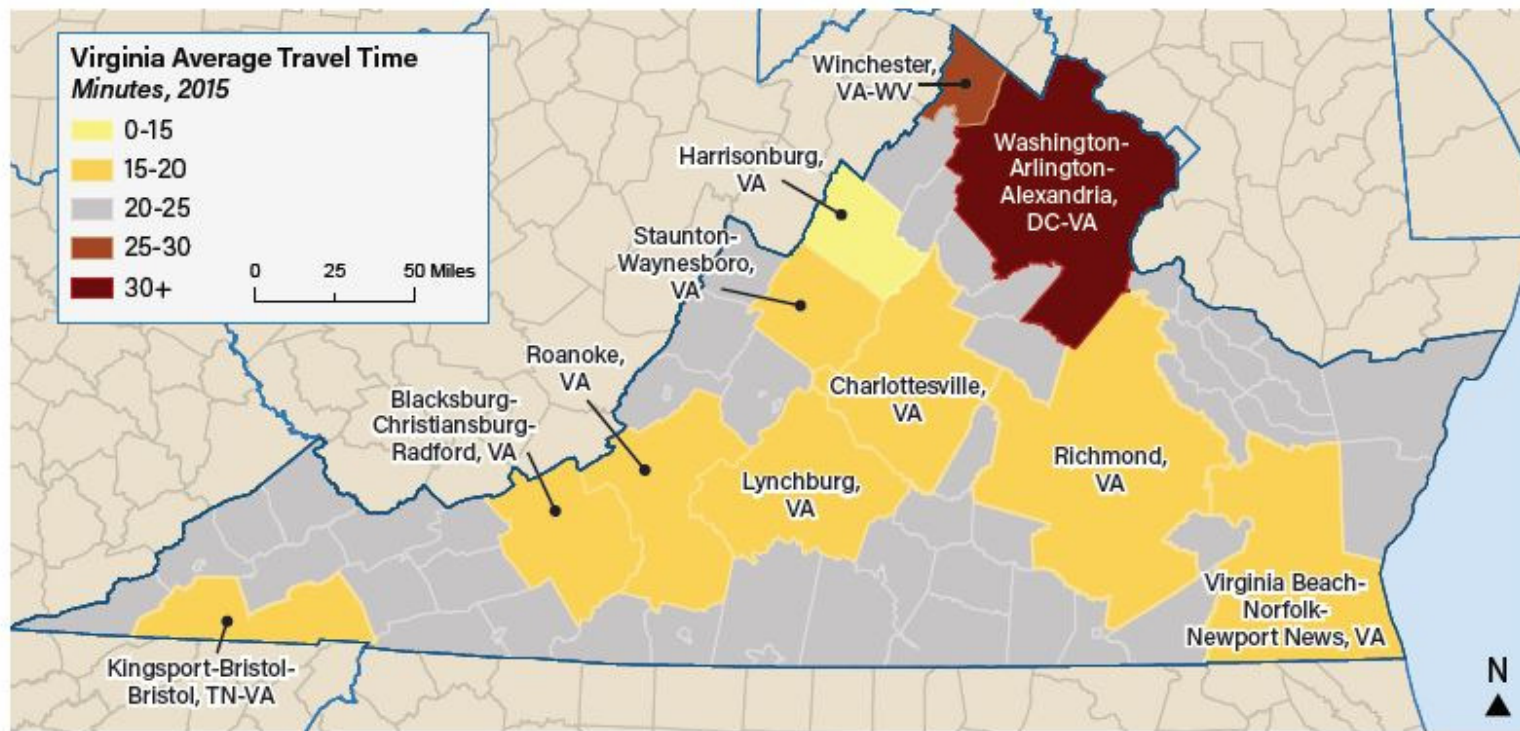

# VTrans GOAL: ACCESSIBLE and CONNECTED PLACES

---

- **Objectives:**
  - **B.1: Reduce average peak-period travel times in metropolitan areas**
    - Average commute time by metropolitan area.
  - **B.2: Reduce average daily trip lengths in metropolitan areas**
    - Average trip length by metropolitan area.
  - **B.3: Increase the accessibility to jobs via transit, walking and driving in metropolitan areas**
    - Number of jobs within 45 minutes of an average household within a metropolitan area by mode.

# B.1: Reduce average peak-period travel times in metropolitan areas

## Average Commute Travel Time

Source: 2015 ACS data.

# B.1: Reduce average peak-period travel times in metropolitan areas

---

**Trend Showing Worsening Performance**

## **Performance Measure:**

- Average Commute Time by Metropolitan Area

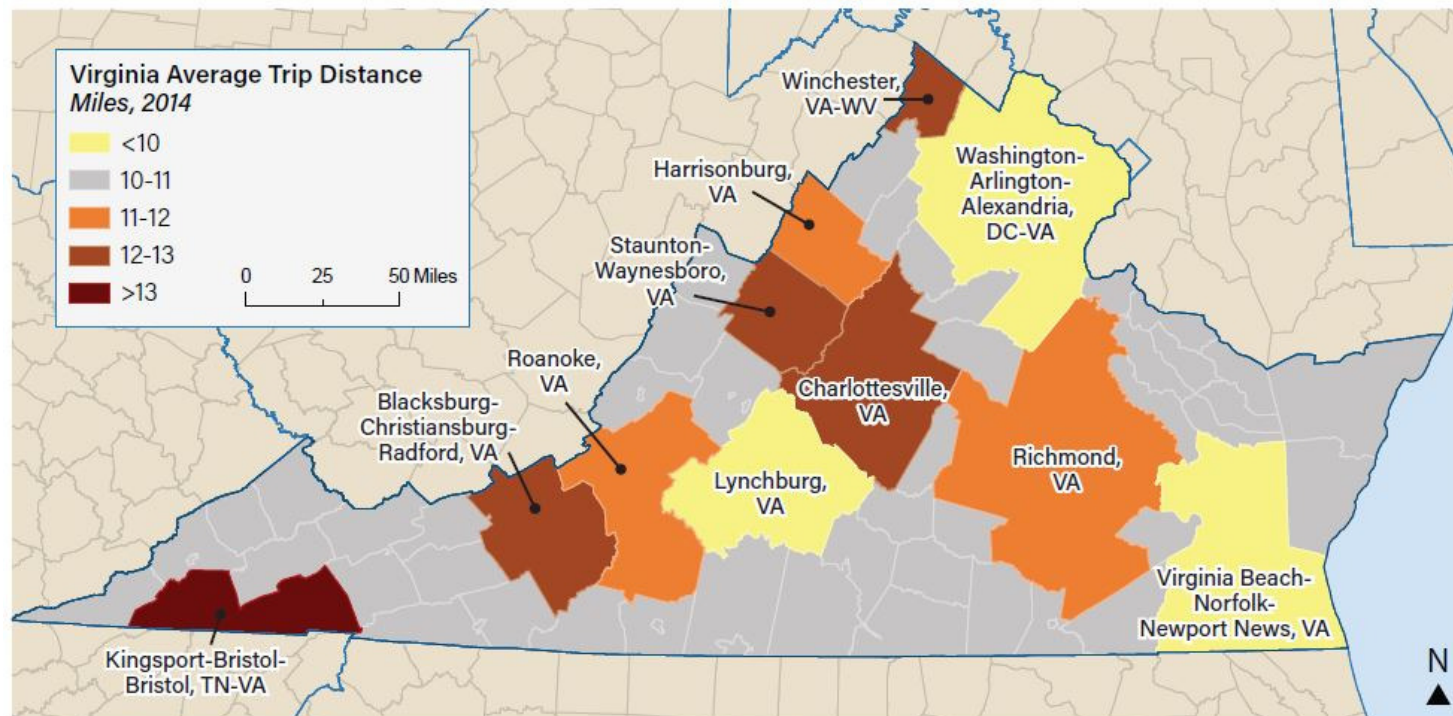

- **Worst Locations:**

- Travel time for Virginia workers slightly increased from 2010 to 2015 based on U.S. Census data.

## B.2: Reduce average daily trip lengths in metropolitan areas

### Average Commute Trip Distance

Source: 2014 StreetLight data.

## B.2: Reduce average daily trip lengths in metropolitan areas

---

### **Inconclusive Trend Due to New Measure Definition**

#### **Performance Measure:**

- Average Trip Length by Metropolitan Area

- **Worst Locations:**

- Urban areas in Virginia with the longest average trip lengths include Charlottesville, Staunton- Waynesboro, Winchester, and Kingsport-Bristol.

- **Why This Is Objective Important:**

- Increases in daily trip lengths in commuters work and non-work trips contributes to congested roads, intensifies vehicle emissions, and impacts productivity.
- By identifying the travel patterns of Virginians in urban areas, this measure helps VDOT plan for programs and initiatives that can reduce both the average length and frequency of household auto travel while facilitating greater accessibility to employment and non-work venues.

# B.3: Increase the accessibility to jobs via transit, walking, and driving in metropolitan areas

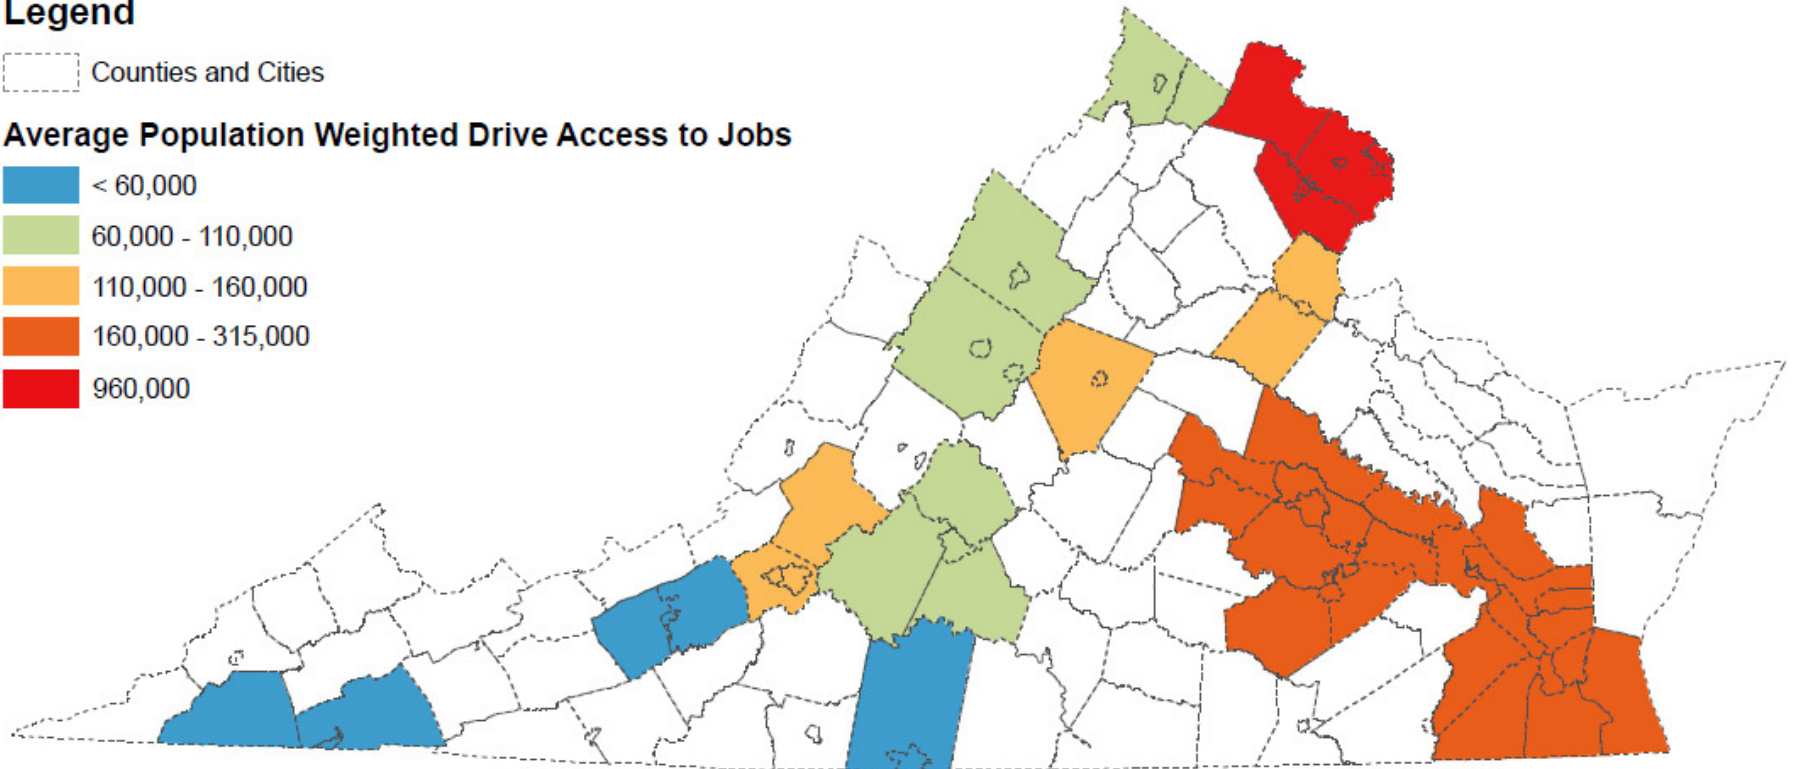

## Average Population Weighted Drive Access to Jobs

### Legend

Counties and Cities

### Average Population Weighted Drive Access to Jobs

- < 60,000
- 60,000 - 110,000
- 110,000 - 160,000
- 160,000 - 315,000
- 960,000

# B.3: Increase the accessibility to jobs via transit, walking, and driving in metropolitan areas

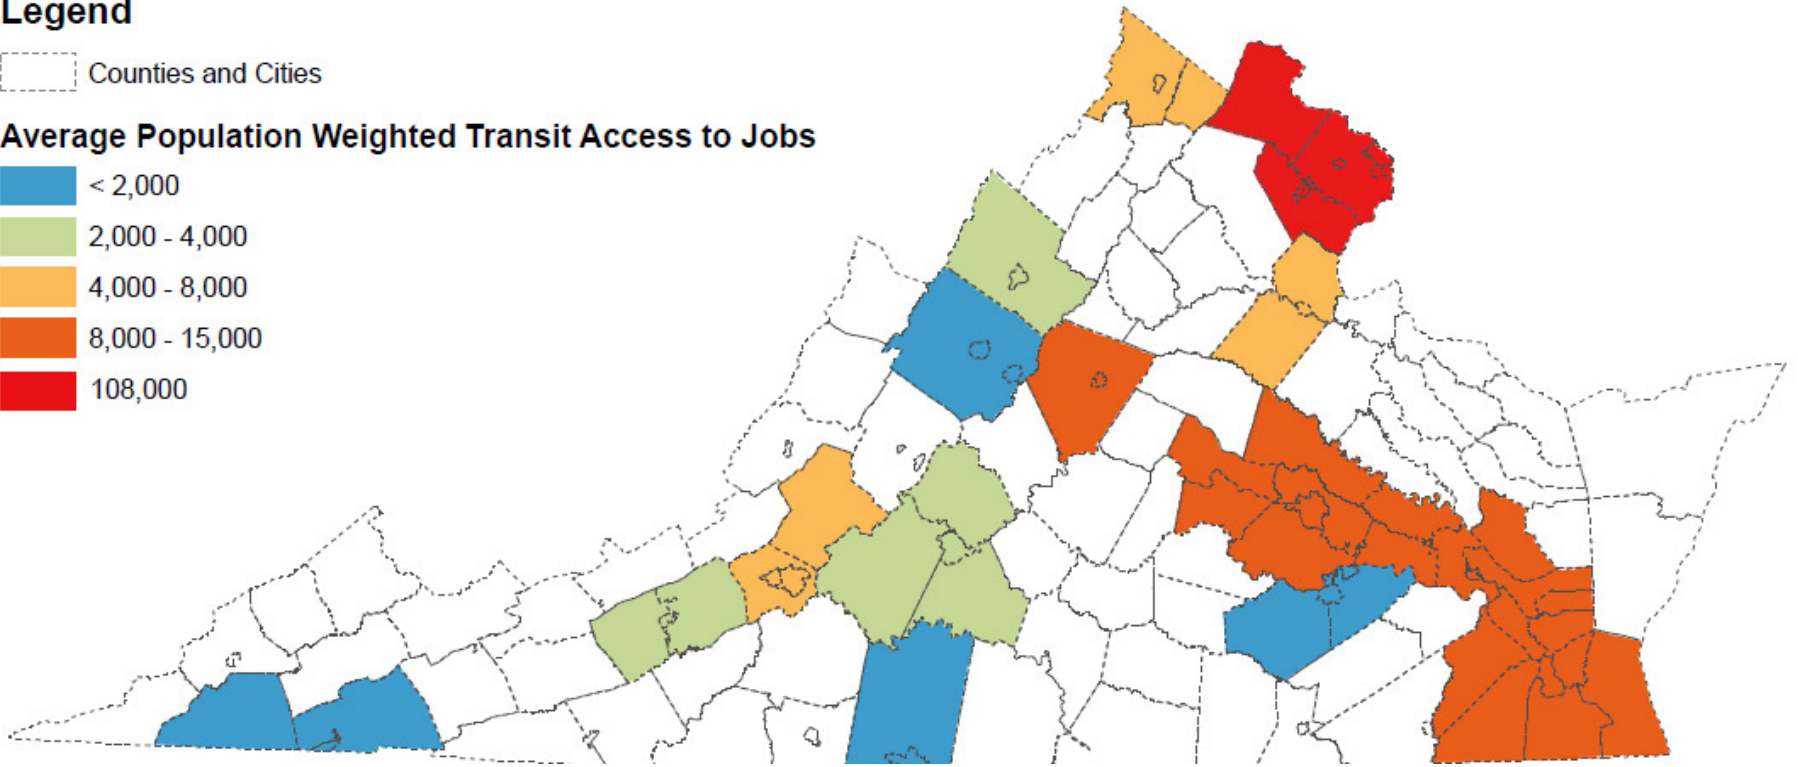

## Average Population Weighted Transit Access to Jobs

### Legend

Counties and Cities

### Average Population Weighted Transit Access to Jobs

- < 2,000
- 2,000 - 4,000
- 4,000 - 8,000
- 8,000 - 15,000
- 108,000

# B.3: Increase the accessibility to jobs via transit, walking, and driving in metropolitan areas

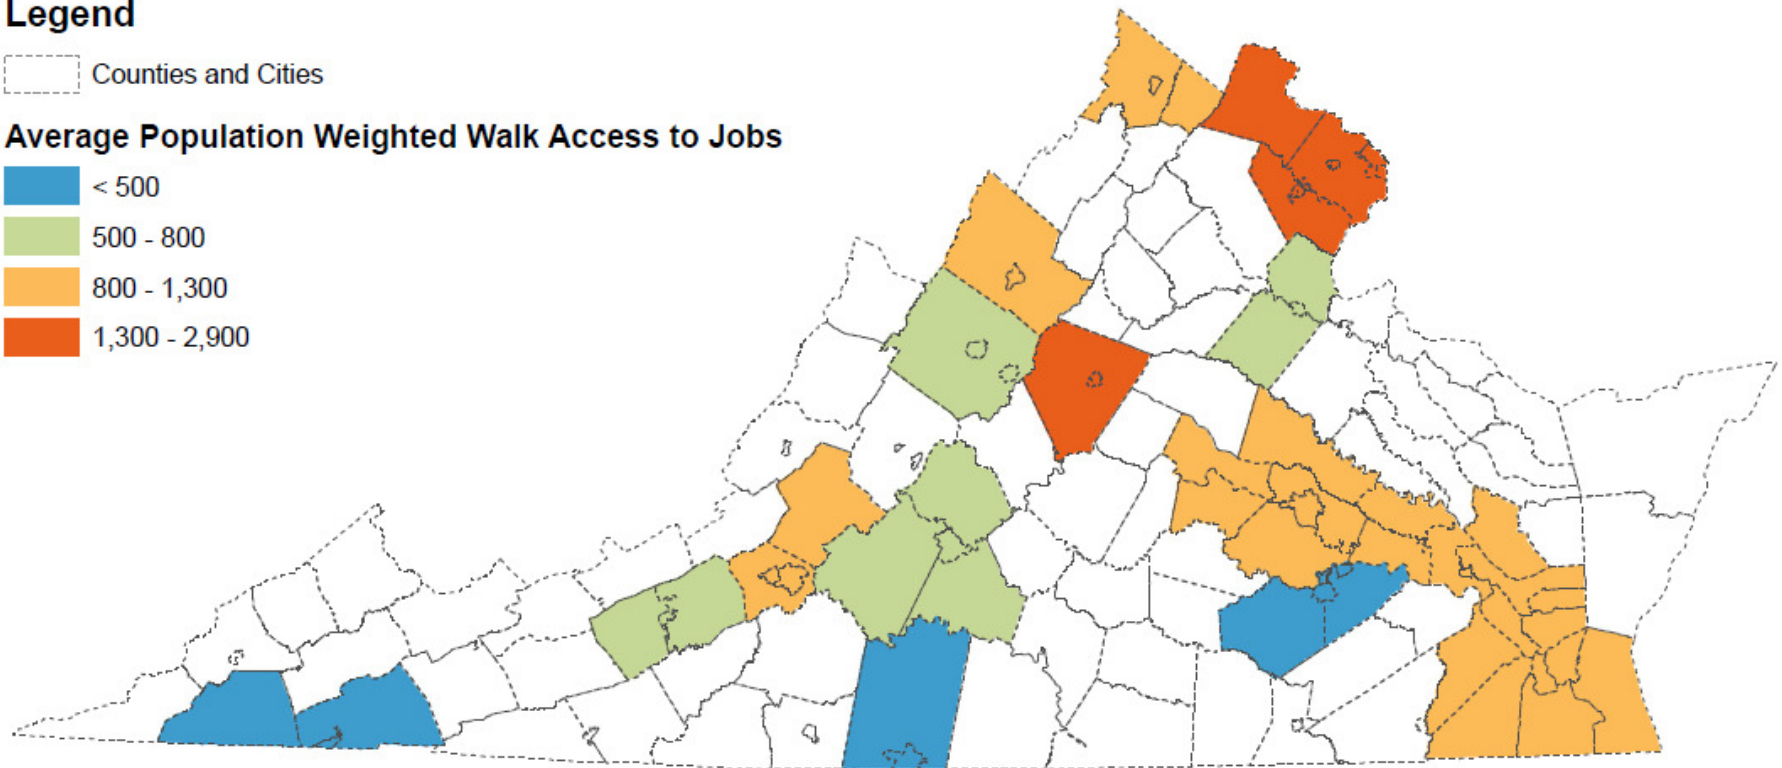

## Average Population Weighted Walk Access to Jobs

### Legend

Counties and Cities

### Average Population Weighted Walk Access to Jobs

- < 500
- 500 - 800
- 800 - 1,300
- 1,300 - 2,900

## **B.3: Increase the accessibility to jobs via transit, walking, and driving in metropolitan areas**

---

### **Inconclusive Trend Due to New Measure Definition**

#### **Performance Measure:**

- Number of jobs within 45 minutes of an average household within a metropolitan area by mode.

- **Reliable longitudinal data on household accessibility to jobs is not available.**
- **Change in accessibility is a strong driver of mode choice.**
- **Based on U.S. Census data, the share of Virginia commuters driving alone has slightly increased from 77.2% in 2011 to 77.5% in 2015.**
- **During the same period, carpooling share has decreased while transit share has slightly increased (4.3% to 4.6%).**

# B.3: Increase the accessibility to jobs via transit, walking, and driving in metropolitan areas

## Average Population Weighted Drive and Transit Access to Jobs in Northern Virginia

### Legend

 Counties and Cities

### Average Population Weighted Drive Access to Jobs

# VTrans GOAL: SAFETY FOR ALL USERS

---

- **Objectives:**
  - **C.1: Reduce the number and rate of motorized fatalities and severe injuries**
    - Total number of motorized fatalities and severe injuries
  - **C.2: Reduce the number of non-motorized fatalities and severe injuries**
    - Number of motorized fatalities and severe injuries per 100 million vehicle miles.
    - Total non-motorized fatalities and severe injuries.

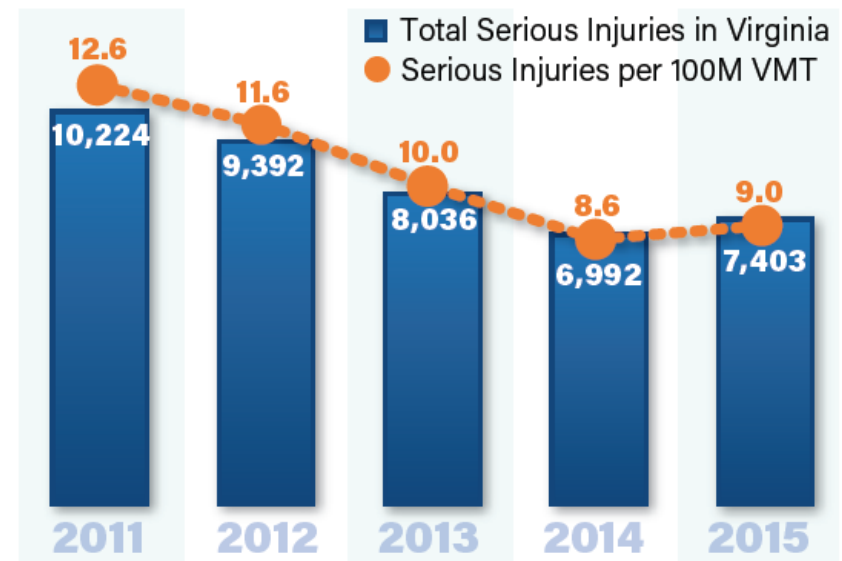

# C.1: Reduce the number and rate of motorized fatalities and severe injuries

## Total number of motorized fatalities and severe injuries

\* Total motorized fatalities, data does not include bicycle and pedestrian fatality data (see Measure C2).

\* Total motorized serious injuries, data does not include bicycle and pedestrian serious injury data (see Measure C2).

# C.1: Reduce the number and rate of motorized fatalities and severe injuries

---

**Trend Showing Improving Performance with Challenges**

## **Performance Measure:**

- Total number of motorized fatalities and severe injuries

**Fatality rate and serious injury rate - trended downward since 2011, (slight increase in 2015).**

## **Fatality causes in Virginia:**

- 32% - alcohol-impaired driving;
- 42% - unrestrained;
- 41% - speed related;
- 14% - distracted driving.

**Crashes are not accidents. In the vast majority of crashes, it is the actions of the road user that cause the crash.**

# C.1: Reduce the number and rate of motorized fatalities and severe injuries

## High Risk Rural Roads in Virginia

# VTrans GOAL: SAFETY FOR ALL USERS

After reviewing the data, the Strategic Highway Safety Plan Steering Committee selected the following emphasis areas (2017-2021):

IMPAIRED  
DRIVING\*

SPEEDING

OCCUPANT  
PROTECTION

ROADWAY  
DEPARTURE

INTERSECTIONS

YOUNG  
DRIVERS

BICYCLES

PEDESTRIANS

\* Includes drunk, drugged, drowsy, and distracted driving.

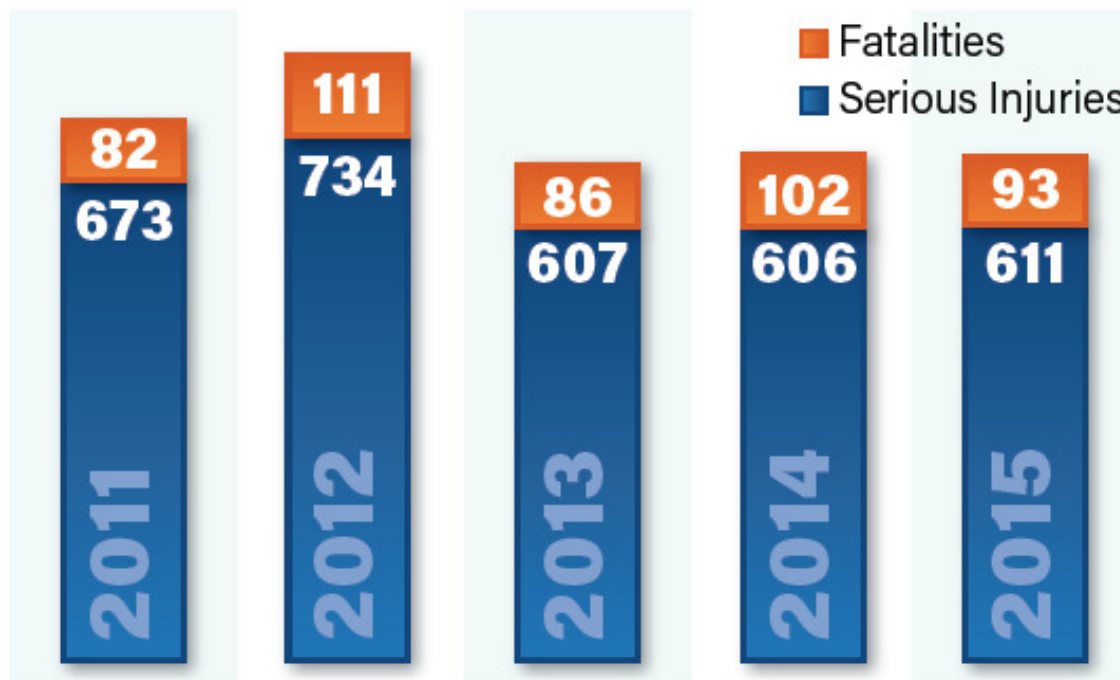

# C.1: Reduce the number and rate of motorized fatalities and severe injuries

## Occupant Protection Fatalities and Serious Injuries by Driver Age and Gender 2011 to 2015

## C.2: Reduce the number and rate of non-motorized fatalities and severe injuries

### Total number of non-motorized fatalities and severe injuries

# C.1: Reduce the number and rate of non-motorized fatalities and severe injuries

---

**Trend Showing Improving Performance with Challenges**

**Performance Measure:**

- Total number of non-motorized fatalities and severe injuries

- **Worst Locations:**

- **Intersections** - interactions between bicyclists and vehicles are heightened.
- **Area of High Vehicle speed** - most crashes involving cyclists occur at locations where the posted speed limit >30 miles per hour.
- **Midblock Crossings** - when a pedestrian was crossing the street not at an intersection.

# C.1: Reduce the number and rate of non-motorized fatalities and severe injuries

## Pedestrian Fatalities and Serious Injuries by Location 2011 to 2015

## C.2: Reduce the number and rate of non-motorized fatalities and severe injuries

### Total number of non-motorized vs. motorized fatalities and severe injuries

# VTrans GOAL: PROACTIVE SYSTEM MANAGEMENT

---

- **Objectives:**
  - **D.1: Improve the condition of all bridges based on deck area**
    - Percent of bridge area rated as structurally deficient.
  - **D.2: Increase the lane miles of pavement in good or fair condition**
    - Percent of lane miles of pavement in fair or better condition.
  - **D.3: Increase percent of transit vehicles and facilities in good or fair condition**
    - Percent of transit fleet under recommended maximum age.

## D.1: Improve the condition of all bridges based on deck area

Percent of bridge area rated as structurally deficient -  
Statewide Percent of Bridge Area Rated as Structurally Deficient (2012 to 2016)

## D.1: Improve the condition of all bridges based on deck area

---

**Trend Showing Improving Performance**

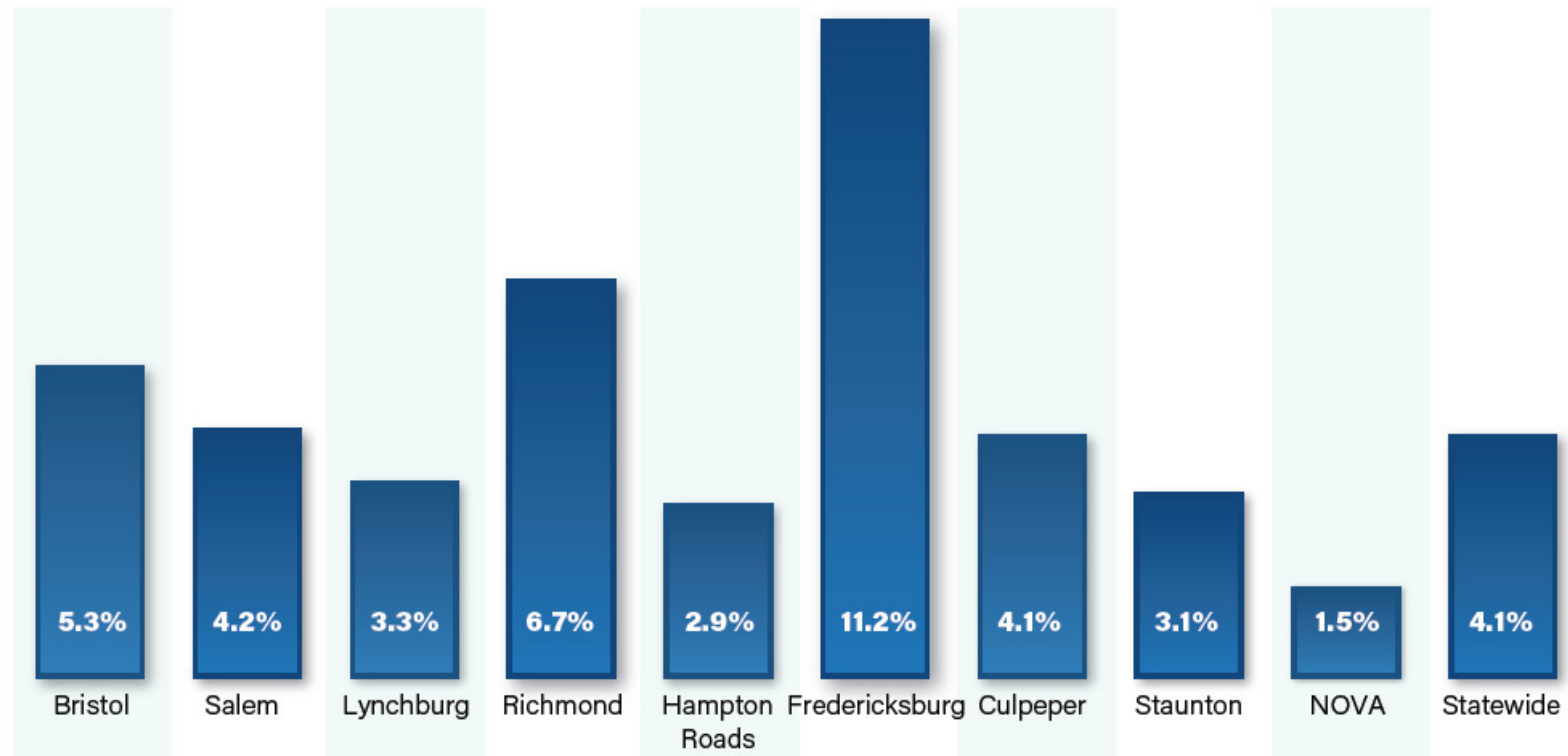

**Performance Measure:**

- Percent of bridge area rated as structurally deficient

- Virginia has seen consistent improvements in bridge and highway structure condition since 2010.

## D.1: Improve the condition of all bridges based on deck area

### Percent of bridge area rated as structurally deficient – by VDOT District

## D.2. Increase the lane miles of pavement in good or fair condition

Percent of lane miles of pavement in fair or better condition.

## D.2. Increase the lane miles of pavement in good or fair condition

---

**Trend Showing Improving Performance with Challenges**

**Performance Measure:**

- Percent of lane miles of pavement in fair or better condition.

- The percentage of roads rated as in fair, good, or excellent condition increased between 2010 and 2016 for both Interstate (+12%) and Primary (+11%) roads.
- Secondary roads saw the opposite trend, with a 6% decrease in roads rated as fair or better (*although the percent of lane miles has remained constant since 2012*).

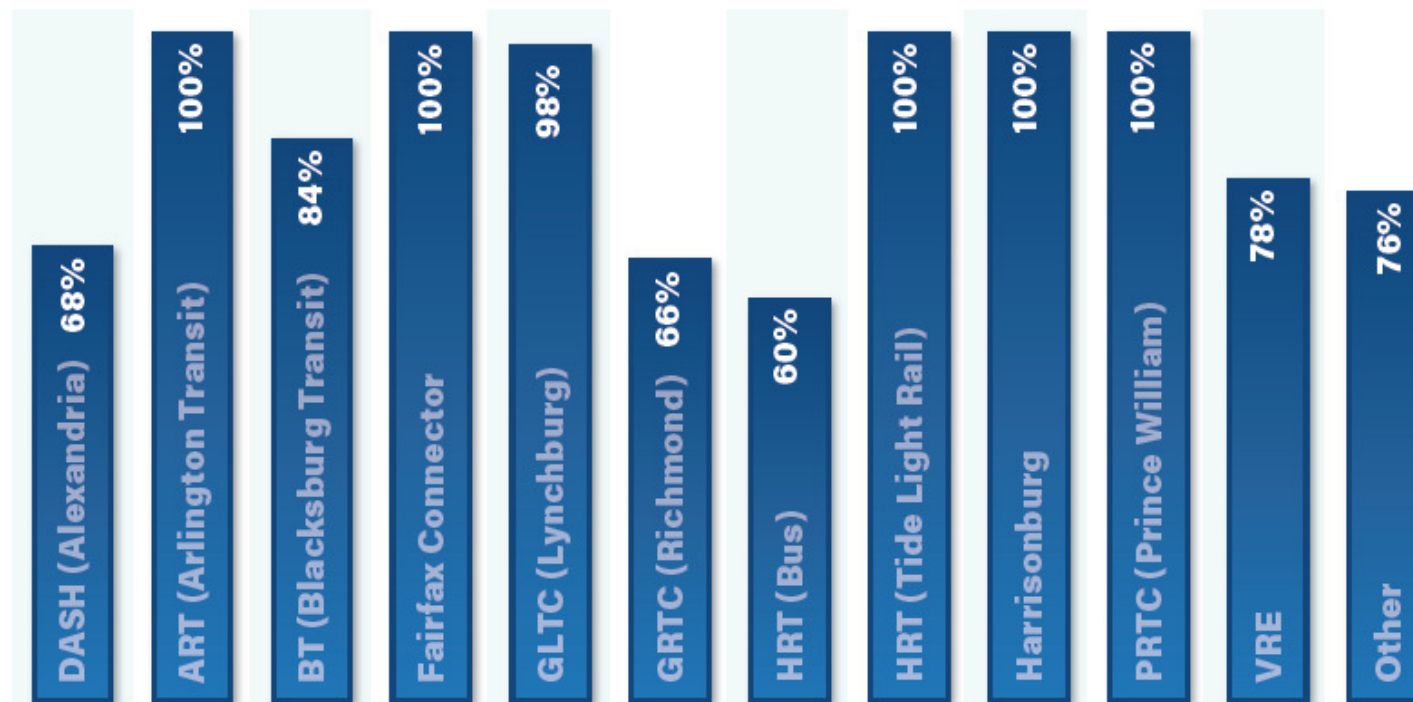

## D.2. Increase the lane miles of pavement in good or fair condition

Percent of lane miles of pavement in fair or better condition.

## D.3: Increase percent of transit vehicles and facilities in good or fair condition

Percent of transit fleet under recommended maximum age (excludes Paratransit).

## D.3: Increase percent of transit vehicles and facilities in good or fair condition

---

### Inconclusive Trend Due to Data Limitations

#### Performance Measure:

- Percent of transit fleet under recommended maximum age (excludes Paratransit).

- Five of 11 transit agencies have 100% of their fleet under the recommended maximum age, the remaining 6 report percentages ranging from 60% to 84%.
- **Reliable longitudinal data not yet available due to different data reporting approaches by agency.**

# VTrans GOAL: HEALTHY COMMUNITIES AND SUSTAINABLE TRANSPORTATION

---

- **Objectives:**
  - **E.1 Reduce per-capita vehicle miles traveled**
    - Vehicle miles traveled (VMT) per capita.
  - **E.2 Reduce transportation related criteria pollutant and greenhouse gas emissions**
    - Annual emissions of NOX, VOC, PM, and CO2 in tons.
  - **E.3 Increase the number of trips traveled by active transportation (bicycling and walking)**
    - Estimated active transportation (bicycling and walking) trips.

# E.1 Reduce per-capita vehicle miles traveled

## Vehicle miles traveled (VMT) per capita.

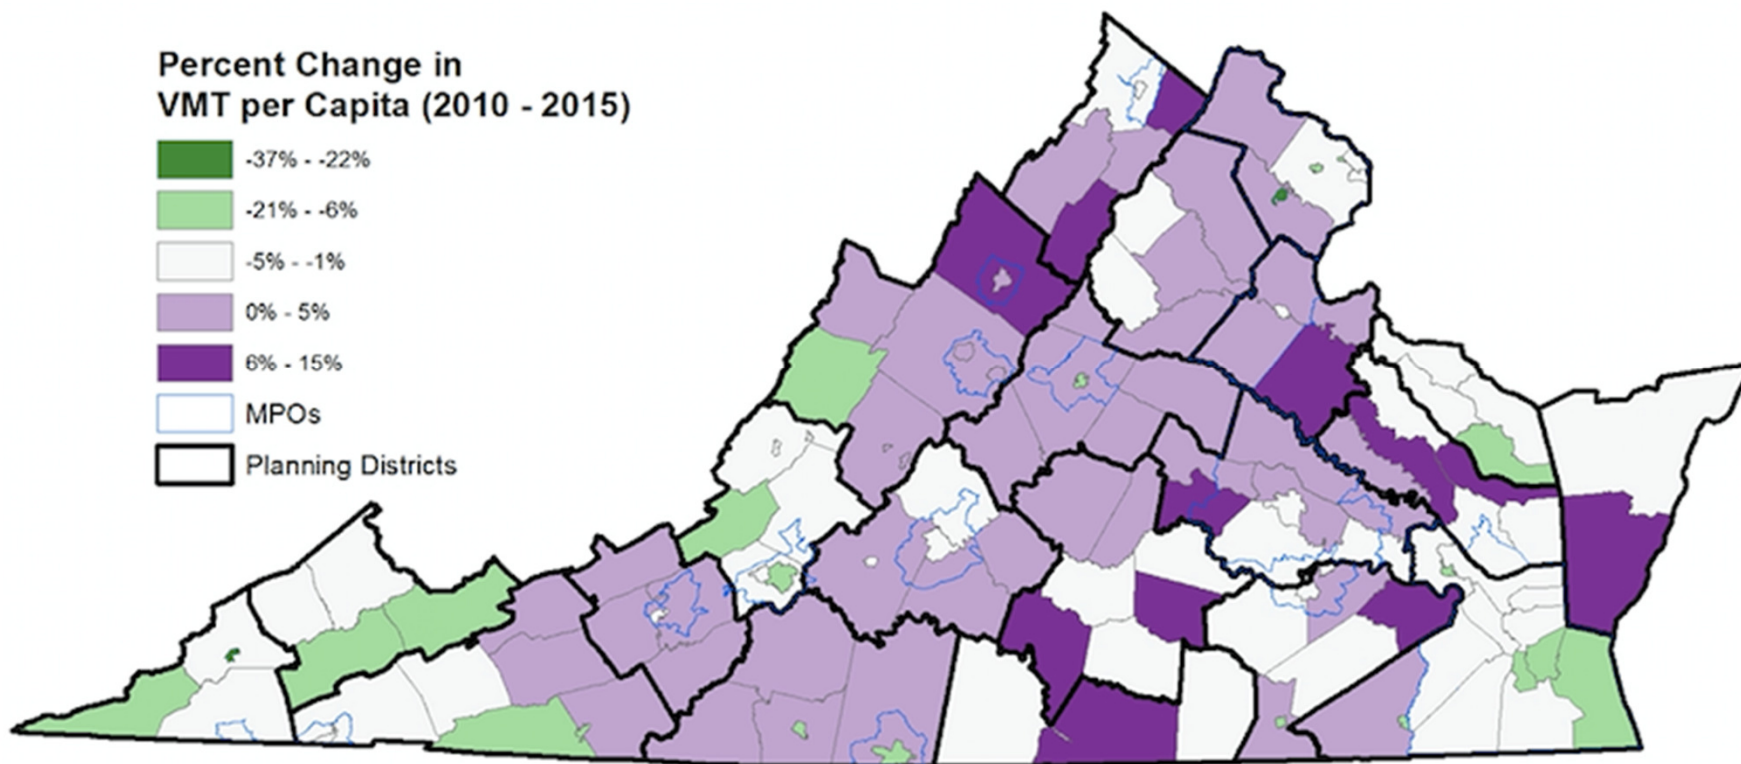

## E.1 Reduce per-capita vehicle miles traveled

### Vehicle miles traveled (VMT) per capita.

# E.1 Reduce per-capita vehicle miles traveled

## Vehicle miles traveled (VMT) per capita.

# E.2 Reduce transportation related criteria pollutant and greenhouse gas emissions

Annual emissions of NOX, VOC, PM, and CO2 in tons.

NORTHERN VIRGINIA NON-ATTAINMENT AREA

## E.2 Reduce transportation related criteria pollutant and greenhouse gas emissions

---

**Trend Showing Improving Performance with Challenges**

**Performance Measure:**

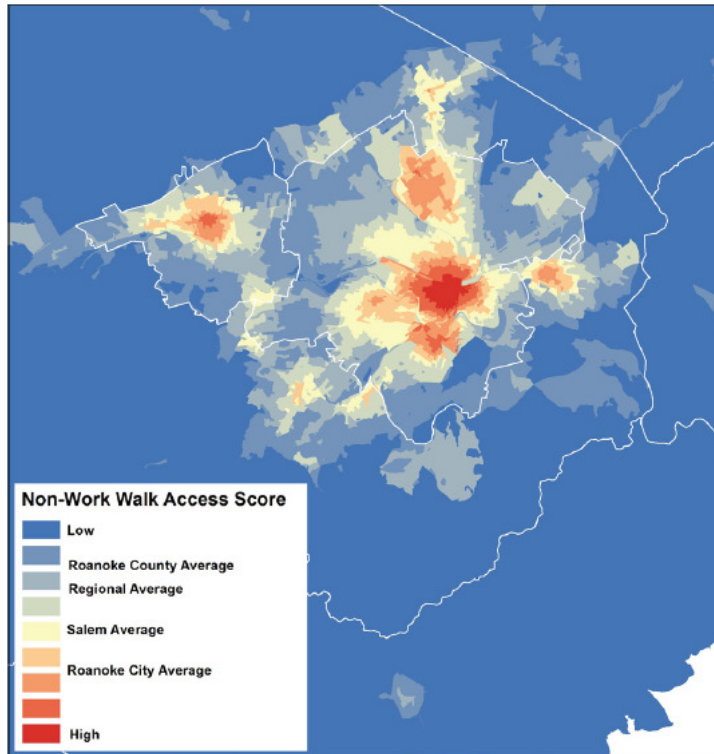

- Annual emissions of NOX, VOC, PM, and CO2 in tons.

- Emissions decrease across most criteria pollutants from 2011 through 2014, however show increases for greenhouse gases.
- Consistent with the National Emissions Inventory, this measure will next be updated in 2018 for CY 2017.

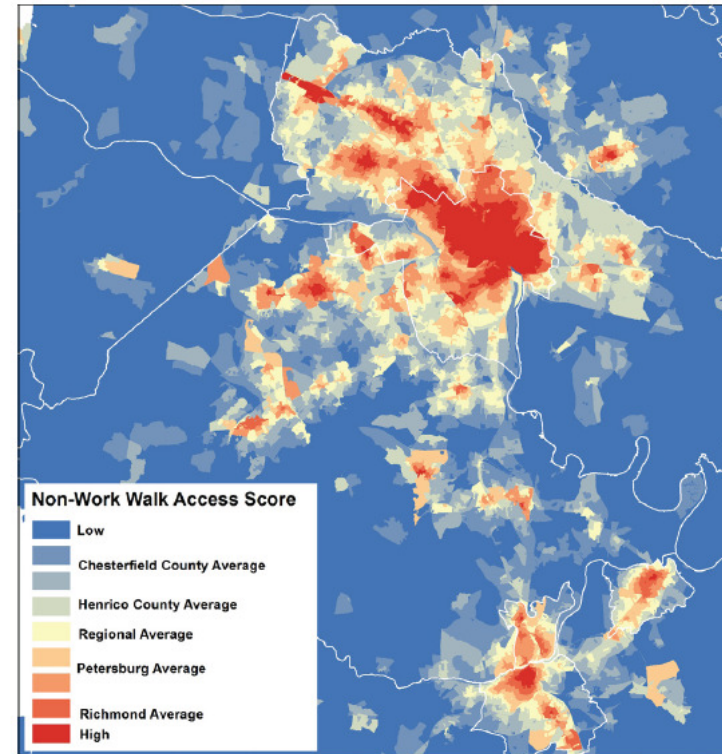

Source: EPA's triennial National Emissions Inventory

# E.3 Increase the number of trips traveled by active transportation (bicycling and walking)

## Non-Work Walk Access Score – Roanoke Region

## Walk Non-Work Access Score – Richmond Region

## E.3 Increase the number of trips traveled by active transportation (bicycling and walking)

### Non-Work Walk Access Score – Roanoke Region

### Walk Non-Work Access Score – Richmond Region

## E.3 Increase the number of trips traveled by active transportation (bicycling and walking)

### Estimated active transportation (bicycling and walking) trips.

Northern Virginia (Core) **31**

Roanoke City **23**

# Target Setting Best Practices

---

- **Use baseline data, information on possible strategies, resource constraints, and forecasting tools to:**
  - Establish a quantifiable level of performance to achieve within a specific time frame
- **Requires consideration of policy changes and VTrans recommendations**
- **Identify risk factors including items outside of the control of the Board, VDOT and DRPT**

# Target Setting Best Practices

---

- **Examples of policies that may impact future targets**
  - **Access management (economic competitiveness, safety)**
  - **Vision zero (safety)**
  - **Urban development area planning grants (economic competitiveness, accessible and connected places, healthy communities and sustainable transportation)**

# Next Steps on Target Setting

---

- **Examination areas with poor and high levels of performance for the various measures**
- **Board consideration of Tier I VTrans Recommendations**
- **Identification of ‘gaps’ where policies may help address poor performance or preserve high performance**
- **Establish targets and process for tracking performance**
